Introduction to Computer Science & Programming in Python

Introduction

This exercise tests the use of external libraries in python. Specifically, you'll generate a pdf file and write to it. You are encouraged to browse through the internet and find a suitable library for this exercise.

Resources

1. https://packaging.python.org/tutorials/installing-packages/

2. https://docs.python.org/3/tutorial/index.html

3. https://www.tutorialspoint.com/python/

4. Learn Python the hard way, 3rd edition

Questions

1. Write a program to:

   a. Generate a pdf file named my_experience.pdf

   b. Write your full name to the first line of the generated pdf file

   c. Write your school name to the second line of the pdf file

   d. Add a text to the pdf file (one paragraph) that describes how the Dufuna program has been so far.

   e. Save the pdf file.

2. Test your program by opening the final Pdf file to confirm if the data written to the file are correct.

Optionally, You can continue the adventure by writing more complex programs that deal with Pdf manipulation.
